Rimrock Service Area Flushing

The District's operations staff will be conducting flushing of the Rimrock Service Area distribution water main on May 13th and 14th between the hours of 6 am and 4:30 pm. The purpose of flushing is to remove particulate iron that may have settled in the water main during the lower velocity non-irrigation period.

If possible, you may consider flushing water through an outside hose bibb after flushing is completed prior to turning on taps within your residence. If water from the hose bibb is discolored, it is recommended that the tap be allowed to run until water is clear. If turning on a hose bibb isn't an option, we recommend flushing water through a cold-water tap until it runs clear. We recommend you do not do laundry on this day due to the potential for staining due to increased iron particulate in the potable supply and minimize drawing water through your hot water heater to the extent possible.

We are sorry for this inconvenience and hope to have this done as quickly as possible and will update the District's website www.nkwsd.com when complete.

Sincerely,

North Kootenai Water District
